

Golf locker

Golf lockers are used for the safe storage of golf trolleys and golf equipment.

Golf lockers are used for safe storage of golf trolleys and golf equipment. A small cut-out in the rear wall also allows power to be supplied to the inside of the cabinet. A storage shelf for the power connection and the charger of the golf trolley is located on the side. In addition, a storage basket for golf balls and small items is attached in the door so that it is easy to reach.

The perforated door ensures sufficient ventilation. High-quality and reliable locks guarantee safe storage of the golf equipment. Due to their high-quality workmanship, the lockers can be placed on top of each other in two tiers.
